

# Compliance Posture Report

SOC 2 & ISO 27001

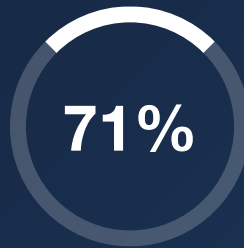

## Task Tracker

ChristianJensen

Report Period: 2026-01-22 — 2026-04-22

Generated: 2026-04-22 10:00 UTC

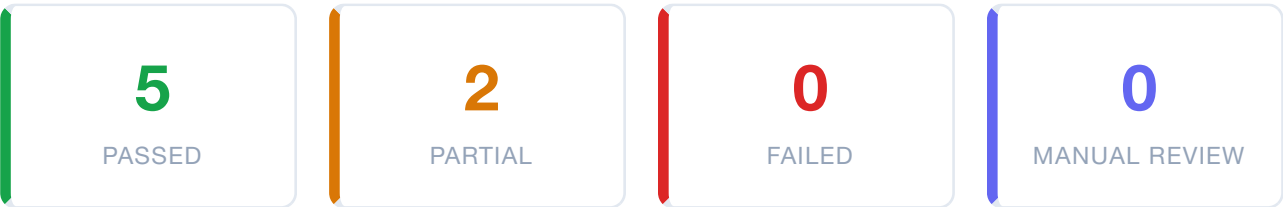

Scope: Change Management & Secure Development (partial SOC 2 / ISO 27001 coverage)

Automated Controls Passing

# Executive Summary

This report assesses the compliance posture of **Task Tracker** (ChristianJensen) for Change Management and Secure Development controls, mapped to SOC 2 Trust Service Criteria and ISO 27001:2022 Annex A. Evidence is collected automatically from the SDLC process and is intended for internal readiness assessment, customer due diligence, and pre-audit preparation.

## By Category

| Category           | Pass | Partial | Fail | Manual | Score                       |
|--------------------|------|---------|------|--------|-----------------------------|
| Change Management  | 1    | 2       | 0    | 0      | <div><div></div></div> 33%  |
| Secure Development | 4    | 0       | 0    | 0      | <div><div></div></div> 100% |

# Scope & Limitations

---

## What This Report Covers

This report provides automated evidence for a focused subset of SOC 2 and ISO 27001 controls where the SDLC process generates strong, machine-verifiable evidence:

- **Change Management** (SOC 2 CC8.1, CC5.1) — authorization, traceability, peer review, and audit trail for all code changes
- **Secure Development** (ISO 27001 A.8.25–A.8.29) — documented SDLC methodology, security coding rules, testing standards, and CI validation

## What This Report Does Not Cover

A full SOC 2 Type II or ISO 27001 certification requires evidence across many additional control domains that fall outside the SDLC. The following areas require separate tooling, processes, and documentation:

- **Organizational Controls** — governance, risk assessment, ethics, HR policies (CC1–CC4)
- **Access & Identity** — provisioning, MFA, privileged access, network segmentation (CC6.x, A.5.15–A.5.18)
- **Operations & Infrastructure** — monitoring, incident response, backup, business continuity (CC7.x, A.8.12–A.8.14)
- **Physical & Environmental Security** (A.7.x)
- **Privacy & Data Protection** — consent, data subject rights, PII handling
- **Cryptography & Key Management** (A.8.24)
- **Vendor & Third-Party Management**

## Intended Use

- Internal readiness assessment for SDLC-related controls
- Customer due diligence — demonstrating development rigor
- Pre-audit preparation — giving auditors a head start on change management evidence

## Change Traceability

Every production change is traceable in both directions: from business requirement (feature spec) through planned work (task specs) to code review (pull requests), and from any PR back to its originating spec via SHA-pinned permalinks embedded in the PR description.

✓ PR contains back-links to feature spec & task file

# Controls Assessment

Each control is mapped to both SOC 2 Trust Service Criteria and ISO 27001:2022 Annex A where applicable.

## Change Management

### CC8.1 Authorization and management of system changes

PARTIAL

Changes to infrastructure and software are authorized, designed, developed, configured, documented, tested, approved, and implemented.

ISO 27001: A.8.32, A.8.25

| Check                                                             | Status | Evidence                                                                                                      |
|-------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------|
| Main branch has protection rules requiring PR reviews             | ✗      | No branch protection found on main                                                                            |
| CI/CD workflow definitions present                                | ✓      | Found: validate-contracts.yml, dispatch-agents.yml, command-center.yml, handle-telemetry.yml, cloud-agent.yml |
| Recent merged PRs have at least one approval                      | ✗      | No recent merged PRs found                                                                                    |
| Completed tasks link back to feature specs via queue              | ✓      | 59/83 tasks linked to PRs                                                                                     |
| PRs contain SHA-pinned back-links to feature specs and task files | ✓      | 59 PR(s) created via relay done — each contains SHA-pinned links back to feature spec and task file           |

### CC5.1 Work is planned and tracked before execution

PASS

The entity selects and develops control activities that contribute to the mitigation of risks to the achievement of objectives. Work is authorized via feature specs before task execution begins.

ISO 27001: A.8.25

| Check                                                      | Status | Evidence                                   |
|------------------------------------------------------------|--------|--------------------------------------------|
| Feature specs exist in features/ before tasks are queued   | ✓      | 25 feature spec(s) found with linked tasks |
| Tasks have assignment tracking (claimed-by and claimed-at) | ✓      | 78/83 tasks have assignment tracking       |

### CC8.1-REVIEW Peer review of changes before deployment

PARTIAL

Changes are reviewed by someone other than the author before being merged to production branches.

ISO 27001: A.8.25, A.8.28

| Check                                                           | Status | Evidence                                |
|-----------------------------------------------------------------|--------|-----------------------------------------|
| Recent merged PRs have review comments or approvals             | ✗      | No recent merged PRs found              |
| Git provides immutable audit trail (author, timestamp, message) | ✓      | 50 commits in last 90 days by 3 authors |

## Secure Development

### A.8.25 Secure development life cycle

PASS

Rules for the secure development of software and systems shall be established and applied.

SOC 2: CC8.1

| Check                                   | Status | Evidence             |
|-----------------------------------------|--------|----------------------|
| SDLC methodology documented in relay.md | ✓      | Found: relay.md      |
| Testing rules and standards documented  | ✓      | Found: testing.md    |
| API design standards documented         | ✓      | Found: api-design.md |

### A.8.26 Application security requirements

PASS

Information security requirements shall be identified, specified and approved when developing or acquiring applications.

SOC 2: CC8.1

| Check                                   | Status | Evidence                      |
|-----------------------------------------|--------|-------------------------------|
| Contract validation runs in CI pipeline | ✓      | Found: validate-contracts.yml |

### A.8.28 Secure coding

PASS

Secure coding principles shall be applied to software development.

SOC 2: CC8.1

| Check                                                            | Status | Evidence           |
|------------------------------------------------------------------|--------|--------------------|
| Security coding rules documented (OWASP, input validation, auth) | ✓      | Found: security.md |

## A.8.29 Security testing in development and acceptance

PASS

Security testing processes shall be defined and implemented.

SOC 2: CC8.1

| Check                                                      | Status | Evidence                                                                                                      |
|------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------|
| Testing requirements including security testing documented | ✓      | Found: testing.md                                                                                             |
| CI pipelines run automated tests                           | ✓      | Found: validate-contracts.yml, dispatch-agents.yml, command-center.yml, handle-telemetry.yml, cloud-agent.yml |

## Cross-Reference Matrix

Controls that satisfy both frameworks simultaneously.

| Area                                   | SOC 2        | ISO 27001                      |
|----------------------------------------|--------------|--------------------------------|
| Change Management & Secure Development | CC8.1        | A.8.32, A.8.25, A.8.28, A.8.29 |
| Work Authorization & Planning          | CC5.1        | A.8.25                         |
| Code Review & Audit Trail              | CC8.1-REVIEW | A.8.25, A.8.28                 |

## Evidence Inventory

| # | Source      | Type                          | Description                                                                                                   | Collected            |
|---|-------------|-------------------------------|---------------------------------------------------------------------------------------------------------------|----------------------|
| 1 | github_api  | branch_protection_enabled     | No branch protection found on main                                                                            | 2026-04-22 10:00 UTC |
| 2 | filesystem  | ci_workflows_exist            | Found: validate-contracts.yml, dispatch-agents.yml, command-center.yml, handle-telemetry.yml, cloud-agent.yml | 2026-04-22 10:00 UTC |
| 3 | github_api  | prs_have_approvals            | No recent merged PRs found                                                                                    | 2026-04-22 10:00 UTC |
| 4 | relay_queue | changes_traceable_to_features | 59/83 tasks linked to PRs                                                                                     | 2026-04-22 10:00 UTC |
| 5 | relay_queue | prs_backlink_to_specs         | 59 PR(s) created via relay done — each contains SHA-pinned links back to feature spec and task file           | 2026-04-22 10:00 UTC |

| #  | Source         | Type                       | Description                                                                                                   | Collected            |
